
Recent Publications on the History of Mining

Compiled by Lysa Wegman-French

The following bibliography contains books, dissertations and theses, articles and chapters of books, and other media—organized within those four categories—that provide new content related to the history of all types of mining in Canada, the United States, Mexico, and Central America. It does not include book review articles, nor reissued or subsequent editions of material.

Digital capabilities are changing our options for seeing works of interest. Some journals are publishing their articles online ahead of printing them (known as preprints, they are often not yet peer reviewed). Moreover, some items are available only on the internet; for these I have included the URL. In addition, some printed works in the bibliography are available for viewing on the internet; I have not included URLs for these, but suggest that you check the internet for their availability.

I thank all the members who have sent in contributions, and welcome suggestions for our next compilation.
